Galvanized body, **AlNiCo 500** magnetic core, anisotropic, working temperature max. +450°C.

The holding force is determined at room temperature (20°C) on a polished plate made of mild steel with a thickness of 10 mm by pulling the magnet vertically from the surface (1 kg ≈ 10 N). A deviation of -10% in the stated values is possible in exceptional cases. In general, the value will be exceeded.
